                                  The invention comprises a method of stimulating and/or expanding T cells specific for a tumour protein. The invention further comprises human nucleic acids and proteins that are associated with tumours (e.g. breast cancer). The method and sequences of the invention are useful for stimulating and/or expanding T cells specific for a tumour protein, abatecting the presence of cancer, stimulating an immune response in a patient and treating breast cancer. The present DNA sequence represents a human tumour-related DNA sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               40

The polypeptide may be used for the diagnosis and treatment of for breast cancers. The methods are useful for detecting the presence of a cancer in a patient and treating a cancer in a patient. The present sequence represents cDNA encoding a human breast cancer-associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          and

```

The invention relates to an isolated polypeptide comprising at least an immunogenic portion of a breast tumour protein. The polymucleotide, its polypeptide, its antibody, a pharmaceutical composition comprising the fusion protein or the polymucleotide encoding it, an isolated T cell the fusion protein or the polymucleotide encoding it, an isolated T cell population comprising T cells specific for a breast tumour protein, and a method for removing tumour cells from a biological sample is useful for inhibiting the development of a cancer in a patient. The polypeptide is useful for stimulating and/or expanding T cells specific for a breast tumour protein. Stimulating and/or expanding T cells specific for a breast cumour protein. Stimulating for inhibiting the development of a cancer in a patient. The method additionally involves the step of cloning at least one proliferated cell and then administering the cloned T cells to the patient. The present sequence represents a cDNA associated with Sequence 1665 BP; 690 A; 289 C; 311 G; 375 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 994 GAAAAGAATGCTGAACTTCAGATGACCCTAAAACTGAAAGAGGAATCATTAACTAAAAGG 1053
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention related to a combination of polynucleotides. The combination of polynucleotides is useful for preparing a composition for diagnosing or treating cancer or neurodegenerative disorders. The present sequence represents the human breast cancer diagnostic marker cDNA Incyte

The method is patient, monitoring the presence or absence of a cancer cell in a patient monitoring the progression of cancer in a patient using a biological sample such as blood, serum, lymph nodes, bone marrow, sputum, urine or a tumour biopsy sample. The methods are useful for determining the presence or absence of or monitoring progression of prostate, breast, colon, ovarian, lung, head and neck, lymphoma, leukemia, melanoma, liver, gastric, kidney, bladder, pancreatic or endometrial cancer.                                                                                                                                                                                                                                                                              The present invention provides the coding sequences and some protein sequences of proteins associated with breast cancer in humans. These sequences can be used in the diagnosis and treatment of cancers,

The invention relates to isolated breast tumour proteins and nucleic acids that encode them, including immunogenic fragments of the proteins. Also included are expression vectors expressing the proteins. transformed cells and antibodies raised against the proteins or an antigen presenting cells and antibodies raised against the proteins or an antigen presenting in the protein. The proteins and nucleic acids may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate breast tumour protein expression, i.e. breast tumours and breast cancer e.g by gene therapy. The nucleic acids and their complements may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. The proteins, nucleic acids and antibodies may be used in assays to identify conceins, nucleic acids and antibodies may be used to down activity. The antibodies and antagonists and antagonists and cated as diagnostic agents for detecting the presence of the proteins in samples capitates expression and activity. The antibodies may also be used as diagnostic agents for detecting the presence of the proteins in samples (e.g. by enzyme linked immunosorbant assay (ELISA)) and in other immunocorput tumour contains the present sequence is a cDNA from a breast tumour contains against

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an isolated breast tumour polynucleotide and the polypeptide it encodes. The polynucleotide and polypeptide are useful for detecting the presence of breast cancer in a patient, and in pharmaceutical compositions for treating breast cancer. The sequences are useful for stimulating an immune response in a patient and can therefore be used in production of vaccines. The sequences are also useful for detecting the presence of a cancer in a patient, by obtaining a biological sample from the patient, contacting the biological sample with a composition of the invention and detecting the amount of polynucleotide that hybridizes to the sample. This sequence represents a human breast
                                                                                                                                                                                                                                                                                                                                                                                       Novel breast cancer polynuclectides and polypeptides encoded by the polynuclectides, useful for detecting the presence of breast cancer in a patient, and in pharmaceutical compositions, for treating breast cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         GluLygAsnAlaGluLeuGlnMetThrLeuLygLeuLygGluGluSerLeuThrLygArg

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention comprises a method of stimulating and/or expanding T cells specific for a tumour protein. The invention further comprises human nucleic acids and proteins that are associated with tumours (e.g. breast cancer). The method and sequences of the invention are useful for stimulating and/or expanding T cells specific for a tumour protein, detecting the presence of cancer, stimulating an immune response in a patient and treating breast cancer. The present DNA sequence represents a human tumour-related DNA sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SerThrIleTyrAsnAsnGluValLeuHisGlnProLeuSerGluAlaGlnArgLysSer 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an isolated breast cancer-associated polypeptide. The polypeptide may be used for the diagnosis and treatment of breast cancers. The methods are useful for detecting the presence of a cancer in a patient and treating a cancer in a patient. The present sequence represents cDNA encoding a human breast cancer-associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             140

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Smooth muscle myosin heavy chain 1 - mouse
C;Species: Mus musculus (house mouse)
C;Accession: JG5420
R;Hasegawa, K.; Arakawa, E.; Oda, S.; Matsuda, Y.
Biochem. Biochem. Biophys. Res. Commun. 232, 313-316, 1997
A;Title: Molecular cloning and expression of murine smooth muscle myosin heavy chains.
A;Reference number: JG5420; MUID:97242182; PMID:9125171
A;Accession: JG5420
A;Molecule type: mRNA
A;Residues: 1-1972 cHAS>
A;Residues: 1-1972 cHAS>
A;Residues: 1-1972 cHAS>
A;Cross-references: UNIPROT:006538; DDBJ:DB5923; NID:g1945077; PIDN:BAA19690.1; PID:g194f
A;Experimental source: smooth muscle
C;Comment: This protein plays a role in smooth muscle cell contraction.
C;Superfamily: myosin heavy chain; myosin motor domain homology
C;Reyvords: nucleotide binding; P-loop
F;88-771/Domain: myosin motor domain homology cMMOT>
F;178-185/Region: nucleotide-binding motif A (P-loop)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1103

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

BS322-specific polynucleotides, polypeptides and antibodies, used in the detection and diagnosis of breast disease especially breast cancer.

Claim 23; Page 123-124; 126pp; English.

The present sequence represents a human BS322 polypeptide. BS322 is a breast tissue marker. The BS322 polynucleotides and polypeptides are used to detect and disgnose breast disease, e.g. breast cancer. The BS322 polynucleotides are useful as a source of probes and primers, and the BS322 polypeptides are useful as antigens

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention provides the coding sequences and some protein sequences of proteins associated with breast cancer in humans. These sequences can be used in the diagnosis and treatment of cancers, particularly breast tumours
                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; breast cancer associated gene; vaccine; diagnosis; therapy.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Genetic subtraction; DNA microarray analysis; polymerase chain reaction;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to identifying tissue-specific polymucleotides (First involves performing a genetic subtraction to identify pool of (P) from tissue of interest (TI), performing DNA microarray analysis to identify first subset of polymucleotides (SP1) at least 2-fold over expressed in TI, and sperforming quantitative polymerase chain reaction (PCR) analysis on SP1 to identify second subset of (P). The method is useful for determining the presence or absence of a cancer cell in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Identifying tissue (tumor)-specific polynucleotides overexpressed in tissue of interest as compared to control tissue, for detecting cancer cells in patient, comprises DNA microarray analysis or quantitative polymerase chain reaction.

The invention relates to isolated breast tumour proteins and nucleic acids that encode them, including immunogenic fragments of the proteins. Also included are expression vectors expressing the proteins, transfoormed cells and antibodies raised against the proteins or an antigen presenting cell expressing the protein. The proteins or an antigen presenting call expression, diagnosis and treatment of diseases associated with imappropriate breast tumour protein expression, i.e. breast tumours and breast cancer e.g by gene therapy. The nucleic acids and their complements may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in necleic acids in samples, and therefore which patients may be in necleic acids in samples, modulators (e.g. antagonists) of breast tumour protein expression and activity. The antibodies may also be used to down regulate expression and activity. The antibodies may also be used to down regulate expression and activity. The antibodies may also be used to down regulate expression and activity. The antibodies may also be used to down cell and protein expression and activity. The antibodies may also be used to down regulate expression and activity. The antibodies may also be used to down cell and activity in the antibodies may also be used to down regulate expression and activity. The antibodies may also be used to down cell and activity from a present sequence is a breast tumour protein encoded by a cDNA from a breast tumour cDNA library isolated by subtractive hybridisation against a normal breast cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   180
